

WAXING FOR HIGH SHINE

The paintwork is in great condition and regularly treated? Then only use the best, tested car waxes available!

TOP TIP

Remember, thorough waxing takes a couple hours. Start as ever, by thoroughly washing your car. Rinse well before applying **Triplewax Car Polish** on either wet or dry paintwork.

CarPlan car waxes effectively protect car paintworks, allowing them to remain in a fantastic condition for longer.

Triplewax car polish

is available in both traditional and metallic formulations.

TOP TIP

Apply wax sparingly and work out into paintwork. Applying a thick layer will not improve the quality of the finish, and will take longer to dry and increase the time it takes to polish.

Auto Finish

is an advanced car wax that provides a superb, long lasting, polished shine.

TOP TIP

To avoid discolouring plastic and rubber black trims, protect them before waxing with **Original Black**.

To seal the high gloss finish for several months, apply a special sealing layer of **Demon Seal and Shine** 24hours after waxing.
